

Placement Partner Pro

Airtable Architecture Blueprint (MVP + Scalable Design)

Purpose

This document defines how Airtable will be used within Placement Partner Pro as an operational backend during MVP and early scaling.

It is designed to ensure clean structure, scalability, and future migration into a custom backend.

Core Tables Overview

- 1 Families
- 2 Seniors / Loved Ones
- 3 Facilities
- 4 Facility Operators
- 5 Resource Partners
- 6 Referrals
- 7 Broadcasts
- 8 Facility Responses
- 9 Tours
- 10 Placements
- 11 Resource Center Content
- 12 Care Assessment Results

Example Table: Facilities (Key Fields)

Facility ID

Facility Name

License Number

License Status

City / County

Capacity

Bed Availability

Care Types

Pricing Range

ALW Participation

Verification Status

Last Updated

System Relationships

Families → Seniors → Referrals

Referrals → Facilities / Broadcasts / Tours / Placements

Facilities → Operators / Responses

Resource Partners → Referrals

Families → Assessments

Airtable Usage Rules

- 1 Use for workflow tracking, referrals, tours, and dashboards
- 2 Do NOT store sensitive medical data
- 3 Do NOT use for authentication or core app logic
- 4 Structure for future migration

Future Expansion Support

- 1 AI matching engine
- 2 Real-time availability
- 3 Advanced analytics dashboards
- 4 Facility verification automation
- 5 Personalized family recommendations
